

Aleatan MT+

COMPOSITION

Liquid aging aid based on ellagic tannins extracted from toasted oak wood from the French Massif Central naturally air-dried for 36 months. **ALEATAN MT+** is stabilized with gum arabic (Acacia Senegal) selected particularly for its structuring-softening effect.

GENERAL CHARACTERISTICS

Appearance: brown, thick and viscous liquid.

ALEATAN MT+ stabilizes the color and structure of treated wine. The raw material and the extraction technique applied allow obtaining a composition very similar to that of polyphenols and compounds extracted from wine during barrel aging. **ALEATAN MT+** regulates the oxidoreductive potential of wine, protects coloring substances, and promotes wine structure.

APPLICATIONS

Its use is recommended during wine maturation.

RECOMMENDED DOSAGES

5 to 50 g/hl during ripening to balance oxidation-reduction potential, protect anthocyanins and polyphenols, and enhance the aromatic qualities of the wine.

MODE OF USE

Add directly into the product to be treated. It is recommended that the product be thoroughly homogenized in the mass. Do not put in contact with iron containers. Shake before use.

PACKAGES AVAILABLE

Bottle 250 g Bottle 1 kg

STORAGE CONDITIONS

Unopened package: store in a cool (temperature below 25°C), dry and ventilated place.

Open package: close tightly and store as indicated above.

Protect from air and sunlight. In its original packaging, the product retains all its properties for 12 months.

Exclusively for oenological and professional use - Reg. (EU) 2022/68

Product obtained from raw materials in accordance with O.I.V. International Oenological Codex
