

Alea KRISTALL

COMPOSITION

Potassium bitartrate, chemically inert filtration aid.

GENERAL CHARACTERISTICS

Appearance: white-colored powder.

ALEA KRISTALL is an oenological aid that promotes the formation of potassium bitartrate crystals in wines, consequently accelerating their precipitation.

The potassium salts present in **ALEA KRISTALL** modify the chemical-physical equilibria of over-saturation, causing the formation of potassium bitartrate micro-crystals, which act as crystallization germs and promote tartaric stabilization of treated wines.

APPLICATIONS

The use of **ALEA KRISTALL** is recommended during stabilization, especially in conjunction with refrigeration treatments.

Its use reduces refrigeration time and also avoids any problems with re-dissolution of salts.

RECOMMENDED DOSAGES

20 to 40 g/hl, depending on the type of wine to be treated.

MODE OF USE

Dissolve **ALEA KRISTALL** in water and add to the mass to be treated, homogenizing it thoroughly.

PACKAGES AVAILABLE

Bag 1 kg 15 kg bag

STORAGE CONDITIONS

Unopened package: store in a cool (temperature below 25°C), dry and ventilated place.

Open package: close tightly and store as indicated above.

Exclusively for oenological and professional use - Reg. (EU) 2022/68

Product obtained from raw materials in accordance with O.I.V. International Oenological Codex
