

Aleavit ERG

COMPOSITION

Preparation based on Bibasic Ammonium Phosphate and low molecular weight yeast peels.

GENERAL CHARACTERISTICS

Appearance: beige-colored powder with a yeasty odor.

ALEAVIT ERG is a fermentation activator to be added to started alcoholic fermentation; it provides ammoniacal nitrogen, minerals, sterols, amino acids, peptides and vitamins in an assimilable form, promoting yeast metabolism.

ALEAVIT ERG contributes to rapid and regular alcoholic fermentation, reducing the risks of fermentation arrest or slowdown in the presence of inhibiting factors or in cases of nutritional deficiency of starting musts.

APPLICATIONS

The use of **ALEAVIT ERG** is recommended for obtaining regular alcoholic fermentations and for optimizing the fermentation course of yeasts.

Its use is recommended in cases of excessively clear musts and in all cases of stunted fermentations due to nutritional deficiencies or the presence of factors inhibiting yeast metabolism.

Fractional additions of **ALEAVIT ERG**, at 1/3 and 2/3 of alcoholic fermentation, are recommended.

RECOMMENDED DOSAGES

20 to 40 g/hl, depending on requirements

20 g/hl of ALEAVIT ERG provides about 30 mg/l of APA

EC Legal Maximum Dose 80 g/hl

MODE OF USE

Dissolve **Aleavit ERG** in a little water and add it in pumping over to the must or wine to be fermented, taking care to properly homogenize the mass. Aerate conveniently as appropriate.

PACKAGES AVAILABLE

Bag 1 kg

STORAGE CONDITIONS

Unopened package: store in a cool (temperature below 25°C), dry and ventilated place.

Open package: close tightly and store as indicated above.

Exclusively for oenological and professional use - Reg. (EU) 2022/68

Product obtained from raw materials in accordance with O.I.V. International Oenological Codex
