

Aleafin BODY

COMPOSITION

inactivated yeasts, catechinic tannins and plant polysaccharides.

GENERAL CHARACTERISTICS

Appearance: beige-colored powder with red highlights.

ALEAFIN BODY is a state-of-the-art complex adjuvant based on plant polysaccharides, specifically selected inert yeasts and condensed tannins.

ALEAFIN BODY is suitable for the aging of all types of wines. It allows increasing body and sweet tannic structure while improving flavor balance and smoothness. It regulates redox potential while also allowing rebalancing of excess aromatic openings. Its use during aging as a replacement or supplement to the natural fine lees of the wine allows the increase of perceived volume in the mouth and flavor complexity.

APPLICATIONS

ALEAFIN BODY is an aging aid indicated for applications on red and white wines that need improved structure and sweetness of flavor.

RECOMMENDED DOSAGES

10-40 g/hL, depending on the products treated and the results to be obtained.

MODE OF USE

Dissolve **Aleafin BODY** directly on wine, at a ratio of 1:10, then add to the mass to be treated, taking care to homogenize thoroughly.

It is always recommended that preventive small-scale testing be carried out to determine the optimal dose.

PACKAGES AVAILABLE

500 g Bag

STORAGE CONDITIONS

Unopened package: store in a cool (temperature below 25°C), dry and ventilated place.

Open package: close tightly and store as indicated above.

Exclusively for oenological and professional use - Reg. (EU) 2022/68

Product obtained from raw materials in accordance with O.I.V. International Oenological Codex
